

Fulltime Backend Engineer (m/f/d)

C#, .NET Core, Python, Azure Cloud

Do you want to work at the intersection of **music and technology**? Would you like to use your backend-engineering skills to help shape the future of **innovative AI tools**? Then Klangio is the right place for you! We develop state-of-the-art AI technology for music transcription – and we are looking for a motivated **Backend Engineer (m/f/d)** to drive the development of our service and AI infrastructure.

These challenges are waiting for you:

- Design and develop scalable and maintainable backend services and APIs for our music transcription platform in the Azure Cloud
- Integrate, optimize and manage SQL database structures
- Automate the boring stuff – use Ansible, Docker and Gitlab CI to automate our build, deployment and infrastructure pipelines
- Collaborate with our small team to improve our system architecture and deliver impactful features
- Conduct code reviews and contribute to improving the team's overall code quality and reliability of our Klangio App Universe

What you can contribute:

- A degree in computer science, software engineering or a comparable qualification
- Professional experience in software development, ideally in the music tech or AI sector
- Proficiency with C#, .NET Core and Python
- Familiar with SQL databases and designing efficient data schemas
- A strong sense of code quality, testing and documentation
- Initiative, reliability and passion for solving technical challenges in a collaborative team
- Excellent German and English communication skills (spoken and written)

Details
